

Tools and Trustworthiness: A Historical Perspective

Dr. Linda S. Gilbert
GilbertL@uga.edu

How I got into this

- Research interest: Intersection of person and computer
 - How people use computers for high-end intellectual and creative activities
- QDA software provided one example
 - Dissertation study – 1999
 - *Reflections of qualitative researchers on the use of qualitative data analysis software: An activity theory perspective*
- Latest and greatest..... N4 !

Overview

- What I learned then
- What I've observed since
 - (With data from literature)
- Thinking about software tools
- Changes to this specific tool over time
- User transitions
- Considerations for trustworthiness

The transition story...

- “Using a computer was awkward at first.”
- “I just couldn't do some things on the computer...”
- “Gradually, I learned.”
- “I developed some strategies that helped me make the transition.”
- “Now, I can't imagine working without it.”
- Writing analogy

The trustworthiness story...

- “I trust my own work much more...”
- “...but I don't trust anyone else just because they use a program..”
- “... and you shouldn't, either. Especially you reviewers.”
- “The software is not a method.”
- “It's just a tool.”
- Tool metaphor

The tool metaphor

- Novices: Software as A tool
- Experienced: Software as a SET of tools
- “Just” a tool: Think again!
 - Novice: Doesn't affect work
 - Experienced: CAN affect work, but researcher should control
 - Theory base: Tools genuinely matter

Impact of tools

- Tools extend and qualitatively change human capabilities
- “Hand tools” vs. “power tools”
 - “Scale” of cognitive tools
- Tools as “crystallized experience”

Exploring the tool metaphor

- Goals of user
- Resource recognition
- Skill of user

(Gilbert, 2002)

Exploring the tool metaphor

- Goals of user
- Resource recognition
- Skill of user

(Gilbert, 2002)

An Activity System

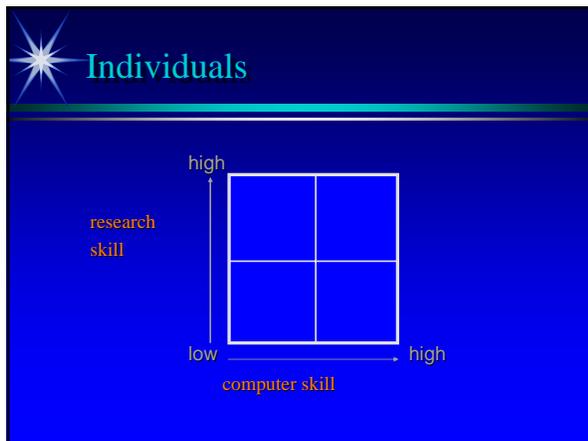

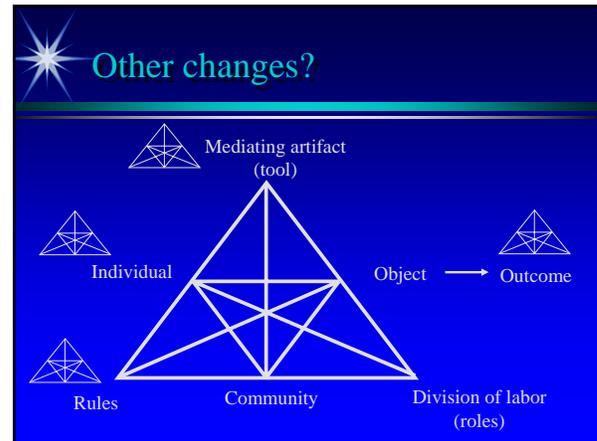

Activity System over time

The development of “the tool”

Year	Event / Tool
1981	Birth! NUD*IST 1 (mainframe)
1987	NUD*IST 2 (mainframe)
1990	NUD*IST 2.3 (Mac)
1993	NUD*IST 3 (Mac)
1994	NUD*IST 3 (PC)
1995	QSR established as independent company
1997	NUD*IST 4 N5 (Mac & PC)(PC)
1999	NVivo 1
2000	2003 QSR “Microsoft certified partner”
2002	N6 NV 2
2006	NVivo 7

Changes to the tool

- Encapsulating experienced users' strategies
 - Example 1: Addition of Free Nodes area (N3 → N4)
 - Example 2: Creation of Case Nodes and Attributes (N4/5/6 → NVivo 1)
- Addressing critiques
 - "Too hierarchical" critique (tree)
- Preventing user error/irritation
 - One-file backup
- Incorporating technological advances
 - Too many to mention!

Critical skills: Then and now

<ul style="list-style-type: none"> ➤ Research skills <ul style="list-style-type: none"> ▪ Be familiar with qualitative research ▪ Have clear research goals ▪ Reflectivity!! ➤ Computer skills <ul style="list-style-type: none"> ▪ Navigate directories ▪ Understand file formats ▪ Problem solving mentality. 	<ul style="list-style-type: none"> ➤ Research skills <ul style="list-style-type: none"> ▪ Manage qualitative research processes ▪ Maintain goal orientation ▪ Reflectivity!! ➤ Computer skills <ul style="list-style-type: none"> ▪ Navigate directories ▪ Understand file formats ▪ Manage multiple windows ▪ Navigate contextual menus ▪ Problem solving mentality.
---	---

Transition points: Then and now

<ul style="list-style-type: none"> ➤ Tactile-digital divide <ul style="list-style-type: none"> ▪ Missing paper, confused by tools ➤ The coding trap <ul style="list-style-type: none"> ▪ Managing closeness and distance ➤ Monitoring "power tools" <ul style="list-style-type: none"> ▪ Checking that it did what you meant. ➤ Continuous learning (individual learning) 	<ul style="list-style-type: none"> ➤ User skill divide / usability issues ➤ Managing ARRAY of tools, what to access (and where) ➤ Consciously managing research processes ➤ Monitoring "power tools" for self AND others ➤ Continuous learning (collaborative)
---	---

Community issues

- Layers of community....
 - QDA users
 - Qualitative researchers in general
 - Academic/professional discipline
- Trustworthiness
 - What is it? Who says?

Trustworthiness: The subtext

- “Using a computer program is not reason enough to assume that work is trustworthy...”
- “...but a lot of people still make that mistake.”
- “You need to look for research goals, appropriate methods, clear links between data and conclusions, things like that.”
- Software can support those things...”
- ... but it doesn’t guarantee them.”
- “A lot of people think that it does.”

Trustworthiness (user perspective)

- Genuine trustworthiness
 - Expertise in tool-user combination supporting research goals
- Appearance of trustworthiness
 - Social status without work-related substance
- Mixed reactions to status
 - “There are people who think that just because I use a computer, my work is suddenly respectable...”

Trustworthiness (larger context)

- “Scientifically-based research”
- Accountability movement
- Reactions from qualitative community
 - Resistance
 - Rapprochement (co-option?)
 - Re-examination

Possible intersections??

- Rejection
 - “Tool of the oppressors”
- Rapprochement/Co-option
 - Danger of appearance of trustworthiness...
 - Possible mandates of use (like ESRC)
- Re-examination
 - Openness to possibilities and methodological advances

Trustworthiness: Then and Now

- Making links between goals and tool use
- Monitoring “power tools”
- Representing tool and work accurately (or not)
- Articulating research goals, research methods, and tool use clearly (transparency)
- Monitoring “power tools”
- Demanding similar standards from other users
- Deciding how to enter the larger conversation on trustworthiness

Recommendations and opinions

- Avoid using context as just a marketing/diffusion opportunity
 - Mandates can be double-edged
 - Misrepresentation will “taint” the tool in the current environment
- Strive to enter the general conversation on trustworthiness (Write!!!)
- Make explicit links between standards of trustworthiness and actual practice (Write!!!)
- Consider tools needed in software (reporting)
